E510

**IP 20/NEMA 1 & IP 66/NEMA 4X
Compact Vector Control Drive**

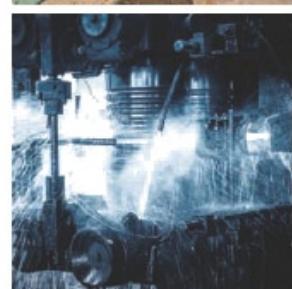

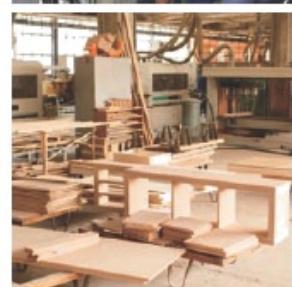

**TAIWAN
EXCELLENCE
2012**

APPLICATIONS

■ General multi-function model IP 20/NEMA 1

- Textiles
- Woodworking
- Small Handling Machine
- Simple Metal Processing
- Machine Tools
- Packaging & Labeling
- Food Processing
- Fan & Pumps
- HVAC

■ Tough enclosure model IP 66/NEMA 4X

- Food processing : against washdown environment
- Textiles : against high heat and humid environment, like dyeing process
- Petrochemical industry : against corrosive environment
- Livestock industry : against washdown environment
- Woodworking manufacturing : against dusty environment

Sealed Design
High level of waterproof and dustproof

CAPACITY RANGE

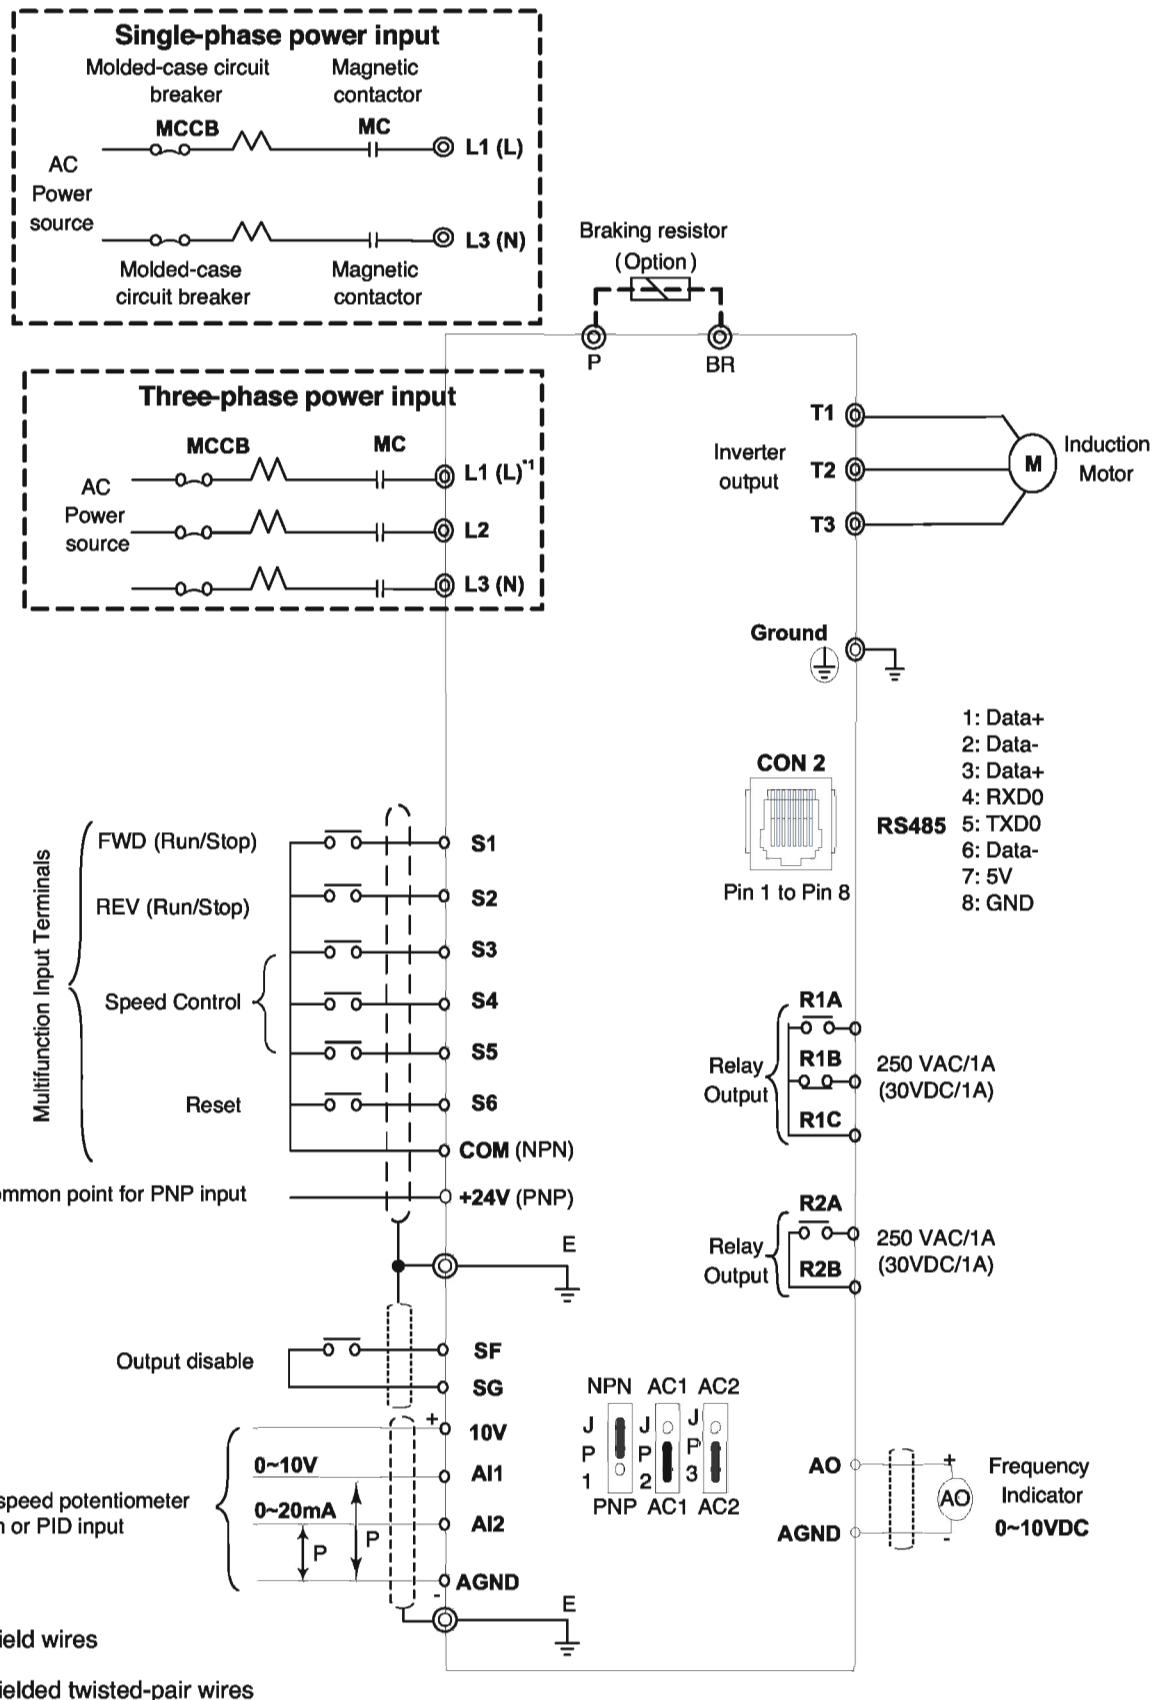

FEATURES AND BENEFITS

	Features	Benefit
Capability	32 bit RISC Processor with an advanced IGBT power switching technology Output frequency range is 0-650Hz Power range: 200V 0.4~15kW (0.5HP~20HP) 400V 0.75~18.5kW (1HP~25HP)	Advanced sensorless vector control, providing a powerful starting torque at low frequency with high performance operation at the highest efficiency.
H/W Function	The latest generation of IGBT power module With 7-segment *5 display panel Standard built-in VR knob Built-in EMC filter in compliance with IEC/EN 61800-3 & 61800-5-1 Fan control (set by parameter)	New generation of IPM/ PIM power module can reach higher efficiency of switching and compact design of inverters. From this information, users can be easy to understand the usage state of inverters. Directly frequency setting and simple to adjust speed Lower electromagnetic interference effectively Fan control is based on the ambient temperature of key components to lower noise and avoid unnecessary energy wasted.
S/W Function	Soft-PWM modulation Integrated safety stop and fire mode functions Auto carrier frequency switching Built-in PID controller Built-in PLC function	Reduce audible motor noise at low carrier frequency Provide advanced application functions under the circumstance of emergency or fire. Built-in sensors detection on operation temperature to avoid the probability of inverter tripping in too high temperature. Provide constant control requirements of frequency, pressure, flow, air volume in applications, such as HVAC Simple process control to save the cost of external PLC
Expansion Flexibility	Built-in Modbus Communication (RS485) PC-software/ Copy unit	Fast parameters copying to reduce time of installation, maintenance and replacement.
Quality	External cooling heatsink	Reduce the possibility of unknown objects entering to avoid damaging components and improve product reliability.

Protective Functions	Overload Protection Over Voltage Under Voltage Momentary Power Loss Restart Stall Prevention Short-circuit Output Terminal Grounding Fault Other Protection Functions
	The relays to protect the motor and the inverter. (150%/1min) 200V class: >410V , 400V class: >820V 200V class: <190V , 400V class: <380V Inverter auto-restart after a momentary power loss. Stall prevention for Acceleration/ Deceleration/ Operation. Electronic Circuit Protection Electronic Circuit Protection Protection for overheating of heat sink, the carrier frequency decreasing with the temperature function, fault output, reverse prohibit, prohibit for direct start after power up and error recovery ,parameter lock up
	All frames include brake transistor
	Communication control
	Standard built-in RS485 communication (Modbus), One to one or One to many control.
	Operating temperature Storage temperature Humidity Shock Enclosure
